

EXECUTIVE BRIEFING

Decision Governance for AI-Accelerated Organizations.

CLARA creates structure, traceability and organizational clarity where increasing speed and complexity challenge decision quality.

CATEGORY	Decision Governance Platform · Decision Intelligence Layer	01
POSITION	The governance layer between communication and execution tools	02
AUDIENCE	C-Level · Boards · Transformation · AI Governance · Strategy	03
STATUS	Pilot-ready · in use in real board- and program-level decision contexts	04

● THE EXECUTIVE PROBLEM

Speed without structure does not produce clarity.

01

Stakeholder coordination becomes harder
More participants, more channels, more parallel threads. Perspectives stay fragmented across meetings, chats and documents.

02

Governance visibility decreases
Decisions move faster than the structures that should document them. Rationale and assumptions become implicit again.

03

More AI inputs do not produce more clarity
Additional options, scenarios and dependencies multiply. Without structure, more information increases ambiguity instead of reducing it.

04

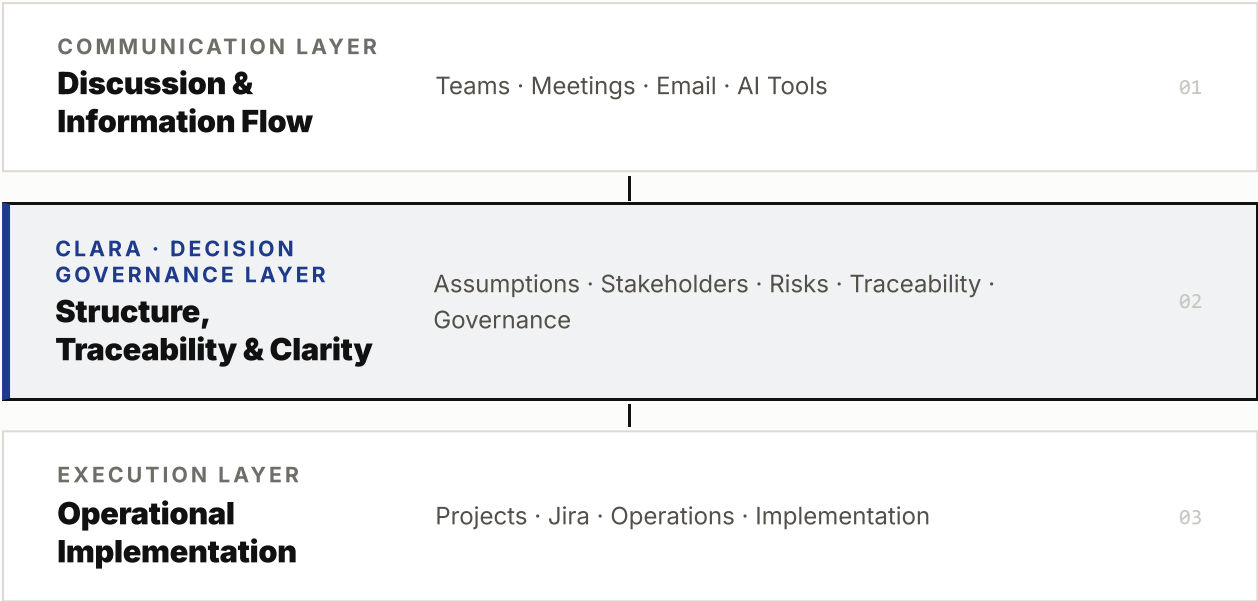

Decision quality becomes unstable under pressure
When speed exceeds structure, contradictions, governance gaps and operational risk follow — not from bad intent, but from missing scaffolding.

COST OF INACTION

A poorly structured program decision typically costs **6–18 months** of delay — not through inactivity, but through rework.

● THE CLARA GOVERNANCE LAYER

A structured layer between discussion and execution.

● WHERE CLARA FITS VS. EXISTING TOOLS

Neither communication nor execution tools close this gap.

NR	TOOL CATEGORY	WHAT IT DOES WELL	GAP CLARA CLOSES
01	Teams · Slack · Email	Communication and coordination across teams.	No structured decision documentation. Rationale dies in threads; assumptions stay implicit.
02	Copilot · ChatGPT · AI Assistants	Accelerate individual content production and analysis.	No stakeholder aggregation, no audit trail. Outputs are individual; governance is not.
03	Jira · Asana · Project Tools	Track execution once a decision exists.	Treat the decision as given. Ambiguous decisions become unstable tickets and rework.
04	BI · Dashboards · Reporting	Make data visible to leadership.	Show data; do not structure decisions. Assumptions, stakeholders and rationale stay outside.

● WHAT MAKES CLARA DIFFERENT

Four principles that distinguish governance from automation.

● 01 Deterministic Governance Decision logic is explicit, reproducible and explainable. AI supports governance — it does not replace accountability.	● 02 Stakeholder Intelligence Leadership teams see who said what, on what basis, and where positions diverge — before decisions are taken, not after.
● 03 Decision Hygiene Assumptions, risks, stakeholders and rationale are structured as a discipline. Decision quality becomes repeatable, not personal.	● 04 Traceability & Explainability Every structured decision leaves a documented trail. Decisions become auditable artifacts, not memories of meetings.

● BUSINESS VALUE

Where governance structure produces measurable improvement.

NR	GOVERNANCE DIMENSION	ORGANIZATIONAL EFFECT
01	Governance visibility	Leadership sees how decisions are formed, where assumptions sit and which stakeholders have been heard.
02	Reduced ambiguity	Implicit assumptions, unclear ownership and conflicting interpretations are surfaced before they reach execution.
03	Structured stakeholder alignment	Cross-functional positions become comparable. Coordination friction drops without forcing extra meetings.
04	Safer AI usage in decisions	AI recommendations carry their assumptions, sources and named human accountability — not as a black-box output.
05	Regulatory readiness	Documented decision conditions support obligations under EU AI Act, NIS2 and DORA without parallel paperwork.
06	Decision traceability	Decisions become documented artifacts that survive personnel changes, board cycles and regulatory review.

● OPERATIONAL MATURITY

CLARA is pilot-ready today.

01 · STAKEHOLDER SCALE

Structures decisions with **4-20 stakeholders** across multiple weeks.

02 · DECISION CONTEXTS

In use in **real board- and program-level** decisions, not demo scenarios.

03 · PILOT FORMAT

Defined **6-10 week pilot** on one real strategic decision, end-to-end.

04 · ADOPTION PATH

Ready from the **first Decision Room** — no enterprise IT rollout in front.

REGULATORY CONTEXT

Designed for environments under **EU AI Act, NIS2** and **DORA** scrutiny — explainability and traceability by construction.

● FIRST STEP

Three steps from briefing to structured decision.

01 · 60 MIN Executive Briefing Working session with the C-Level core team. One concrete decision use case from your organization on the table.	02 · 6-10 WEEKS Pilot Decision Room One real strategic decision, structured end-to-end. Fully documented, auditable, owned by your team.	03 · ROLLOUT Structured Adoption Expansion to 2-3 parallel Decision Rooms with a defined governance framework and clear scope.
---	---	---

Organizations do not fail because they lack information.

Organizations fail because decisions become unclear under pressure.

CLARA exists to stabilize governance, clarity and decision quality in increasingly complex environments.
